## Course Summary:

The P405: Management of Asbestos in Buildings course will provide practical knowledge and skills to be able to manage asbestos in buildings and to provide a basic knowledge of asbestos removal procedures. Training is in accordance with HSE guidance and audited by the British Occupational Hygiene Society. This is a Proficiency Module Syllabus, an internationally recognised qualification.

## Prior Knowledge:

Delegates for this course are expected to be aware of the contents of The Control of Asbestos Regulations 2012 and in particular regulation 4 and the supporting Approved Code of Practical L127 (Details will be provided upon reserving your place)

## Learning Outcomes:

- Students will have a clear understanding of the legislation relating to asbestos.
- Students will be able to identify the main types of asbestos materials and the appropriate means of recording the locations of asbestos in buildings and be fully aware of the procedures and methods for the prevention of future damage to asbestos containing materials. The student will be able to develop an action plan on the basis of survey information and properly manage the asbestos that is remaining in a premises by suitable schemes.
- Students will be thoroughly familiar with current good practice in enclosures for asbestos remediation and must be able to identify examples of poor working procedures in a practical situation.
- Students will be able to understand the role of the analyst, air monitoring techniques and the four stage clearance procedure.
- Students will have a good understanding of the pressure and demands on various parties during an asbestos removal project.
